

CONCEPTS: BULLS-EYE COMPOSITION

1. When either sounds or shapes make repeating patterns our attention is engaged.
2. Patterns made with shapes and colors make visual rhythms.
3. Geometric shapes capture our attention more easily because they are mathematically coherent.
4. All artists arrange the elements within their work intentionally, make rhythms intentionally.
5. The strongest rhythms are the simplest.
6. Color is combined in visual art, the same way that sounds are arranged into chords of music: to create a feeling.
7. Different color systems create different moods, the same way different chord structures capture different moods.
