

## COLOR WHEEL: RUBRIC

A

C-F

Student completes a color wheel with three primaries, three secondaries, and six tertiary colors	The color wheel is not complete
The color steps are measured so the jump between colors is not too extreme or too close together; just an even progression.	The color steps are not even and a clear progression between colors is not achieved.
The colors are clear and the student controls the brush so that the edges of the color sections are clean, not bumpy or mushy.	The colors are muddy, not mixed accurately, and the painted edges are messy and run into each other.
The color wheel is posted in student's research notebook with annotation that uses the vocabulary words for this project	Color wheel is not posted in process journal and/or there is no annotation, or the annotation is not inaccurate and does not use vocabulary words accurately
All notebook pages are numbered and dated.	Pages in notebook are not numbered and dated
Deadlines are met.	Deadlines are not met.
